Sun protective hats

To protect skin and eyes from ultraviolet (UV) damage, wear a hat that protects the face, back of the neck, eyes and ears.

Broad-brimmed, bucket or legionnaire hats offer the best protection from UV radiation. Baseball or peaked caps and sun visors are not recommended as these do not protect the ears, cheeks or neck.

For best protection during the daily sun protection times (when the UV level is 3 or higher) use all five SunSmart steps:

- Slip on clothing
- Slop on SPF30 (or higher) broad-spectrum, water-resistant sunscreen
- Slap on a hat
- Seek shade
- Slide on sunglasses.

The free SunSmart app tells you the sun protection times for your location and provides current UV levels. Sun protection times can also be found at the Bureau of Meteorology websites and live UV levels are also available from ARPANSA.

Which type of hat?

Wear a hat that provides good shade to the face, back of the neck, eyes and ears. Broad-brimmed and bucket hats provide the most UV radiation protection for the face and head. Legionnaire hats also provide good UV radiation protection. Baseball caps do not protect the cheek, ears and neck and are not recommended.¹

Wearing a hat with a brim that shades the eyes can also reduce UV radiation to the eyes by 50%.²

---

¹ Please see table on the next page for recommended brim width measurements according to age range and head wear size.

² Legionnaire hats are more suited to people who are active or doing activities involving bending.

When choosing a hat look at:
- the quality of sun protection it offers
- the type of fabric it is made from – a tighter fabric structure is best
- the fabric’s ultraviolet protection factor (UPF) rating – fabric with UPF15 offers good protection while one that is UPF50 offers excellent protection. Even if the fabric is excellent, make sure the hat’s overall design is effective too.
- whether it is practical (i.e. easy to keep on and doesn’t interfere with activities)
- cost
- safety
- ventilation (especially if the hat is to be used during physical activity or in warmer weather).

Hats that can be adjusted at the crown or can be tied at the front to help secure it on a child’s head are best. If the hat is secured with a long strap and toggle, ensure it has a safety snap, place the strap at the back of their head or trim the length so it doesn’t become a choking hazard.

**Hat accessories**
Sun protection accessories such as broad-brim attachments or legionnaire-style covers are available for workers who are required to use a helmet or hard hat.

There are also attachments for cyclists to provide protection while wearing their helmet.
